**SITE SENSITIVITY VERIFICATION REPORT (SSVR)
FOR**

**PROPOSED EXPANSION OF ABALONE FARM ON PORTION 2 OF THE
FARM 711, GANSBAAI, CALEDON RD**

Compiled by:

Lornay Environmental Consulting

Compiled for:

Terrasas Group (Pty) Ltd

AQUNION

INTRODUCTION

The proposed development involves the expansion of the existing Romansbaai Abalone Farm, located on Portion 2 of Farm 712. This expansion aims to enhance production capacity of the farm by expanding operational facilities to meet these needs. Key components of the development include the expansion of the production area through two phases, the expansion of the existing pumphouse, the installation of new pipelines, and the construction of a lined seawater reservoir. Additionally, a solar power array will be integrated into the project, generating approximately 4 MW of electricity to support sustainable operations. The location for the expansion project is located approximately 500 m inland from the highwater mark, behind (northeast) of the existing operations.

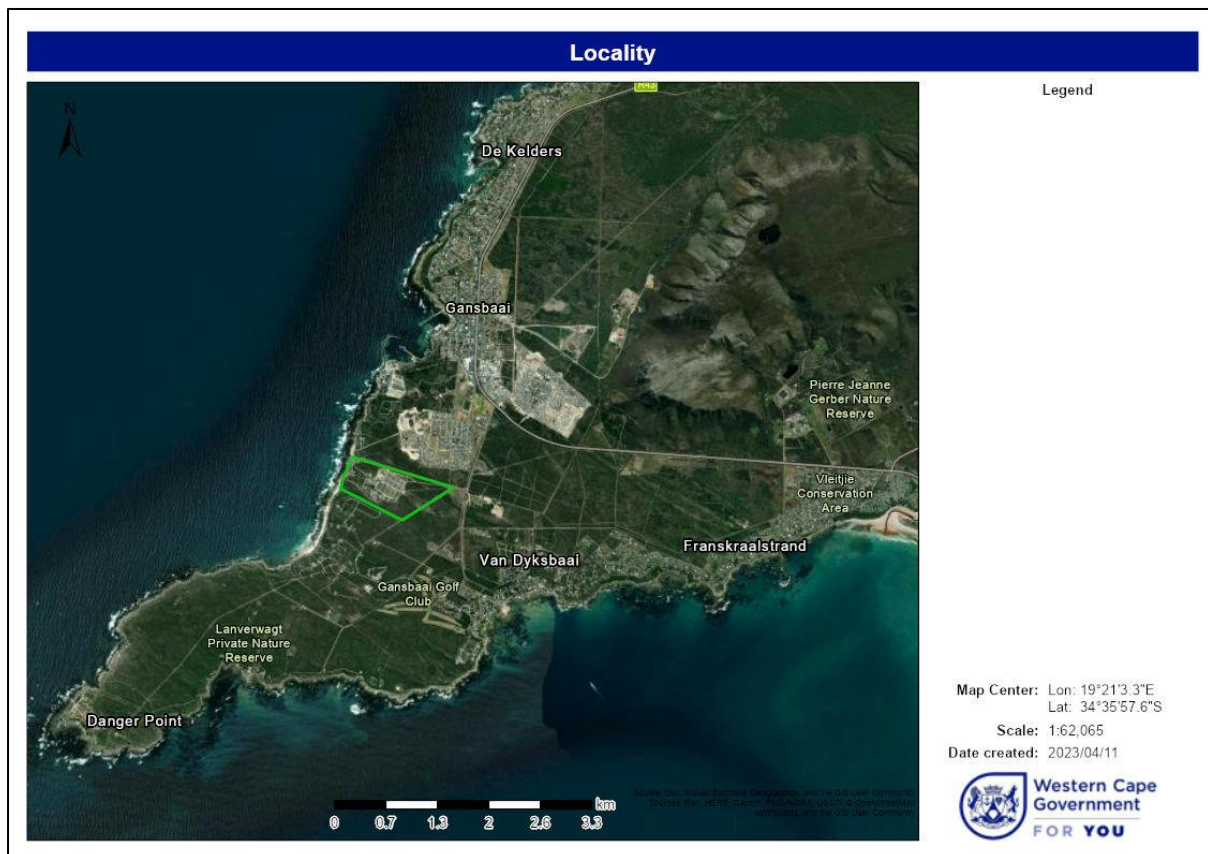

Figure 1. Locality of subject property

The preliminary layout alternative is as follows and will be assessed by the relevant specialists in due course.

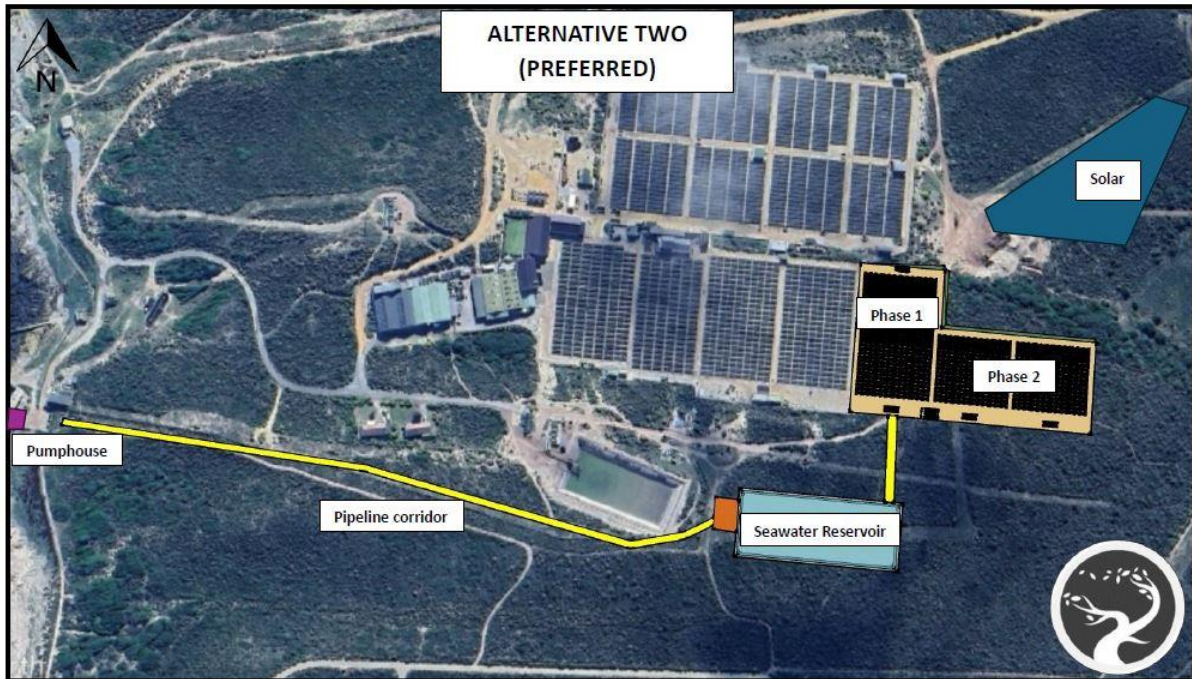

Figure 2. Preferred alternative two – Expansion of existing abalone farm includes the expansion of the existing pumphouse, placement of a solar array, addition of new pipelines and construction of new seawater reservoir.

PURPOSE OF THE REPORT

Lornay Environmental Consulting (Pty) Ltd was appointed to undertake the required Environmental Authorisation (EA) application process in terms of the Environmental Impact Assessment (EIA) Regulations, 2014 (as amended) promulgated under the National Environmental Management Act, 1998 (No. 107 of 1998; NEMA), for the proposed project.

Based on the classification selected and the known impacts with the proposed development, the Screening Tool lists the following specialist assessments to be included in the BAR process and / or motivation as to why these specialists are not applicable to the site

- Landscape / Visual Impact Assessment
- Archaeological and Cultural Heritage Impact Assessment
- Palaeontology impact assessment
- Terrestrial Impact Assessment
- Aquatic Biodiversity Impact Assessment
- Socio-Economic Impact Assessment
- Plant Species Assessment
- Animal species assessment

Theme	Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
Agriculture Theme		X		
Animal Species Theme		X		
Aquatic Biodiversity Theme	X			
Archaeological and Cultural Heritage Theme	X			
Civil Aviation Theme		X		
Defence Theme				X
Paleontology Theme	X			
Plant Species Theme			X	
Terrestrial Biodiversity Theme	X			

Agricultural Theme – High Sensitivity – The activity involves the expansion of an existing agricultural facility, specifically an Abalone Farm. The activity is in line with the agricultural theme and therefore no further assessment is required.

Animal Species Theme – High Sensitivity – The expansion is situated within an area already impacted by the day-to-day operations of the existing Abalone Farm. The adjacent property has been artificially stocked with various species of small antelope which access the land, these will not be impacted by the expansion. The areas proposed for the expansion link directly to the existing operations and have been impacted by fringe activities. For this reason it is the recommendation of the EAP that no further assessment is required in this theme.

Aquatic Biodiversity Theme – Very High Sensitivity – There are no freshwater indicators on site, this has been verified through on-site sensitivity verification by the EAP as well as findings by the Terrestrial / Boanical specialist, where no wetland indicator species are identified. The expansion of the pumphouse will take place below the high-water mark of the sea but is a small-scale expansion to existing disturbed zone.

Archaeological and Cultural Heritage Theme – Very high sensitivity – in line with the requirements of the National Heritage Resources Act, a Notice of Intent to Develop was submitted to Heritage Western Cape as part of the BAR process. HWC confirmed that a Heritage Impact Assessment with AIA, PIA, VIA and comments from SAHRA Maritime Underwater Culture Unite, is required. These assessments have been completed and are included herein. Mitigation measures have been incorporated in the EMP.

Civil Aviation Theme – High sensitivity – the proposed development is the expansion of existing activities and therefore no additional impacts are expected to this theme. No further assessment required.

Defence Theme – Low. No impacts envisaged. No further assessment required

Palaeontology – very high - PIA completed and findings outlined herein. Mitigation measures have been incorporated into the EMP.

Plant Species Theme – Medium – A terrestrial biodiversity assessment covering the Plant Species Theme has been completed for the site.

Terrestrial Biodiversity Theme – Very high – Assessment completed. The proposed expansion occurs next to the existing operation facilities of the farm and some areas are already disturbed by day-to-day operations. The assessment incorporated the plant species theme under this theme. About 14ha of the 50ha property surveyed is of High botanical sensitivity, and the underlying vegetation type (Overberg Dune Strandveld) is gazetted as Endangered on a national basis. Approximately 40% of this High sensitivity area will be lost or disturbed by the proposed development. At least five plant Species of Conservation Concern (SoCC) were recorded in four of the five footprint areas, but viable populations of all SoCC will remain on undeveloped parts of the property, and most of them should survive in the PV area if the vegetation in this area is brushcut to about 1m tall. Search and Rescue of all translocatable bulbs (geophytes) should be undertaken from the approved development footprints for Phases 1 & 2 and the new dam prior to construction. This should be done at the end of the flowering season for the relevant species (ranges from April to October). Material should be translocated to other parts of the property where it will not be disturbed in future, and which is ecologically similar. No large-scale soil disturbance

Figure 4: The northeastern part of the property falls on the edge of the CBA.

Photo 3: Current conditions of the site proposed for phase 1

CONCLUSION

The following specialists have been appointed as part of the project team.

- Heritage Impact Assessment.
- Terrestrial Biodiversity Impacts Assessment

Public participation on Pre-Application BAR to follow.

Kind regards,

MICHELLE NAYLOR
